

Subject Index of Volume 129

Acid–base equilibria

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

Anisotropic reorientation

Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

Anisotropy

Comparison of the fluorescence behaviour of rhodamine 6G in bulk and thin film tetraethylorthosilicate derived sol–gel matrices, 71

Anthracene

Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

Atomic carbon, C(2^3P_J)

Collisional removal of atomic carbon, C($2p^2(^3P_J)$), by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

Aza aromatic compounds

Photoreaction in two-component molecular crystals of α -hydroxycarboxylic acids and aza aromatic compounds, 121

Benzoquinone

Photoalkylation of quinones with ethers, 49

bis-Pyrazolopyridines

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

By-products

Removal of hydroxylamine by processes generating OH \cdot radicals in aqueous solution, 105

Charge transfer

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

Chlorophyll

Chlorophyll *a* aggregates stabilized by a synthesized peptide, 51

Cis–trans isomerization

Photochemical *cis–trans* isomerization of 1,2-dibenzoyl-3-substituted cyclopropanes, 43

ClOCl

A resonance Raman study of Cl $_2$ O photochemistry in solution: evidence for ClClO formation, 9

Collisional removal

Collisional removal of atomic carbon, C($2p^2(^3P_J)$), by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

Cr(VI)

Photocatalytic properties of ZrO $_2$ and Fe/ZrO $_2$ semiconductors prepared by a sol–gel technique, 89

4,4-Dehydroxohimbine

Photophysics and photochemical oxidation of yohimbine in moderately concentrated sulfuric acid methanol–water media, 57

Dihydropyridine

On the mechanism of bleaching reactions in a photochromic dihydropyridine derivative, 81

EDTA

Photocatalytic properties of ZrO $_2$ and Fe/ZrO $_2$ semiconductors prepared by a sol–gel technique, 89

Electron-hole recombination

Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO $_3$ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Energy transfer

Comparison of the fluorescence behaviour of rhodamine 6G in bulk and thin film tetraethylorthosilicate derived sol–gel matrices, 71

Energy transfer

Laser flash photolysis study of *N*-alkylated phthalimides, 111

ESR spin trapping

Photochemistry of *ansa*-zirconocenes: ethylene-bis(1-indenyl)- and ethylene-bis(4,7-dimethyl-1-indenyl) zirconium dichlorides, 137

Excited state intramolecular proton transfer

o-Quinone methide formation from excited state intramolecular proton transfer (ESIPT) in an *o*-hydroxystyrene, 157

Fluorescence

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

Fluorescence

Laser flash photolysis study of *N*-alkylated phthalimides, 111

Gas phase reactions

Collisional removal of atomic carbon, C($2p^2(^3P_J)$), by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

H $_2$ O $_2$ /UV process

Removal of hydroxylamine by processes generating OH \cdot radicals in aqueous solution, 105

Halooxide photochemistry

A resonance Raman study of Cl $_2$ O photochemistry in solution: evidence for ClClO formation, 9

Herbicides

Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

Heterogeneous photocatalysis

Photocatalytic properties of ZrO $_2$ and Fe/ZrO $_2$ semiconductors prepared by a sol–gel technique, 89

Heterogeneous photocatalysis

The application of oscillatory flow mixing to photocatalytic wet oxidation, 17

Hydrogen-bonding

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

Hydroxylamine

Removal of hydroxylamine by processes generating OH \cdot radicals in aqueous solution, 105

α -Hydroxycarboxylic acids

Photoreaction in two-component molecular crystals of α -hydroxycarboxylic acids and aza aromatic compounds, 121

Hydroxystyrene

- o*-Quinone methide formation from excited state intramolecular proton transfer (ESIPT) in an *o*-hydroxystyrene, 157

 π - π interaction

- Photochemical *cis-trans* isomerization of 1,2-dibenzoyl-3-substituted cyclopropanes, 43

 γ -irradiation

- Removal of hydroxylamine by processes generating OH[•] radicals in aqueous solution, 105

Kinetic parameters

- Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

Kinetics

- On the mechanism of bleaching reactions in a photochromic dihydropyridine derivative, 81
- Photophysics and photochemical oxidation of yohimbine in moderately concentrated sulfuric acid methanol–water media, 57

LALLS, low-angle laser light scattering

- Chlorophyll *a* aggregates stabilized by a synthesized peptide, 51

Liquid phase

- Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

Long distance proton transfer

- Active participation of solvent molecules in photo-induced enol-keto tautomerisation of 7-hydroxyquinoline with a mobile proton carrier as substituent, 129

Metallocenes

- Photochemistry of *ansa*-zirconocenes: ethylene-bis(1-indenyl)- and ethylene-bis(4,7-dimethyl-1-indenyl) zirconium dichlorides, 137

Monosubstituted naphthalenes

- Monosubstituted naphthalenes as quenchers and generators of singlet molecular oxygen, 25

Multiphoton effects in aerosols

- The necessity for multiphoton processes in the 193-nm photochemistry of sulphuric acid aerosols, 101

Nitrite

- Photocatalytic properties of ZrO₂ and Fe/ZrO₂ semiconductors prepared by a sol-gel technique, 89

OH[•] radicals

- Removal of hydroxylamine by processes generating OH[•] radicals in aqueous solution, 105

Oscillatory flow

- The application of oscillatory flow mixing to photocatalytic wet oxidation, 17

Oxyfluorfen

- Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

PdO-doped SrTiO₃ electrodes

- Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO₃ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Peptides

- Chlorophyll *a* aggregates stabilized by a synthesized peptide, 51

Photo-oxidation

- Photophysics and photochemical oxidation of yohimbine in moderately concentrated sulfuric acid methanol–water media, 57

Photoalkylation

- Photoalkylation of quinones with ethers, 49

Photocatalyst

- Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO₃ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Photochemical alkylation

- Photoalkylation of quinones with ethers, 49

Photochromism

- On the mechanism of bleaching reactions in a photochromic dihydropyridine derivative, 81

Photocurrent

- Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO₃ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Photodecarboxylative dehydrogenation

- Photoreaction in two-component molecular crystals of α -hydroxycarboxylic acids and aza aromatic compounds, 121

Photodegradation

- Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

Photodimerization

- Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

Photohydration

- o*-Quinone methide formation from excited state intramolecular proton transfer (ESIPT) in an *o*-hydroxystyrene, 157

Photoluminescence

- Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO₃ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Photolysis

- Photochemistry of *ansa*-zirconocenes: ethylene-bis(1-indenyl)- and ethylene-bis(4,7-dimethyl-1-indenyl) zirconium dichlorides, 137

Photooxidation mechanism

- Monosubstituted naphthalenes as quenchers and generators of singlet molecular oxygen, 25

Photooxidation products

- Monosubstituted naphthalenes as quenchers and generators of singlet molecular oxygen, 25

Photophysical properties

- Photochemical behaviour of oxyfluorfen: a diphenyl-ether herbicide, 65

Photophysics

- Photophysics and photochemical oxidation of yohimbine in moderately concentrated sulfuric acid methanol–water media, 57

N-phthalimides

- Laser flash photolysis study of *N*-alkylated phthalimides, 111

Polarization-induced photochemical reaction

- Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

2-Propanol

- Electron-hole recombination via reactive intermediates formed on PdO-doped SrTiO₃ electrodes. Estimation from comparison of photoluminescence and photocurrent, 143

Quinone methide

- o*-Quinone methide formation from excited state intramolecular proton transfer (ESIPT) in an *o*-hydroxystyrene, 157

Racemization

- Photochemical *cis-trans* isomerization of 1,2-dibenzoyl-3-substituted cyclopropanes, 43

Reaction rates with aldehydes and ketones

- Collisional removal of atomic carbon, C[2p²(³P_J)], by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

Relaxation

- Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

Resonance Raman

- A resonance Raman study of Cl₂O photochemistry in solution: evidence for ClCIO formation, 9

Semiempirical calculations

Acid–base properties of bis-pyrazolopyridine derivatives in nonaqueous solutions, 33

Singlet molecular oxygen quenching and generation

Monosubstituted naphthalenes as quenchers and generators of singlet molecular oxygen, 25

Singlet oxygen

Laser flash photolysis study of *N*-alkylated phthalimides, 111

Solid-state photoreaction

Photoreaction in two-component molecular crystals of α -hydroxycarboxylic acids and aza aromatic compounds, 121

Solvent assisted proton transfer

Active participation of solvent molecules in photo-induced enol-keto tautomerisation of 7-hydroxyquinoline with a mobile proton carrier as substituent, 129

Sulphuric acid absorption spectrum

The necessity for multiphoton processes in the 193-nm photochemistry of sulphuric acid aerosols, 101

Sulphuric acid aerosols

The necessity for multiphoton processes in the 193-nm photochemistry of sulphuric acid aerosols, 101

Sulphuric acid excited states

The necessity for multiphoton processes in the 193-nm photochemistry of sulphuric acid aerosols, 101

Sulphuric acid photochemistry

The necessity for multiphoton processes in the 193-nm photochemistry of sulphuric acid aerosols, 101

Thin film and bulk sol–gel derived matrices

Comparison of the fluorescence behaviour of rhodamine 6G in bulk and thin film tetraethylorthosilicate derived sol–gel matrices, 71

Time-resolved atomic resonance absorption spectroscopy

Collisional removal of atomic carbon, $C[2p^2(^3P_J)]$, by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

Time-resolved fluorescence

Comparison of the fluorescence behaviour of rhodamine 6G in bulk and thin film tetraethylorthosilicate derived sol–gel matrices, 71

Titania

Photocatalytic properties of ZrO_2 and Fe/ZrO_2 semiconductors prepared by a sol–gel technique, 89

Triplet

Laser flash photolysis study of *N*-alkylated phthalimides, 111

Two-component molecular crystals

Photoreaction in two-component molecular crystals of α -hydroxycarboxylic acids and aza aromatic compounds, 121

Ultra-fast proton transfer

Active participation of solvent molecules in photo-induced enol-keto tautomerisation of 7-hydroxyquinoline with a mobile proton carrier as substituent, 129

Uniaxially orientated poly(methyl methacrylate)

Polarization-induced intramolecular photodimerization in uniaxially stretched poly(methyl methacrylate), 147

Vacuum ultra-violet

Collisional removal of atomic carbon, $C[2p^2(^3P_J)]$, by aldehydes and ketones, investigated by time-resolved atomic resonance absorption spectroscopy in the vacuum ultra-violet, 1

Yohimbine

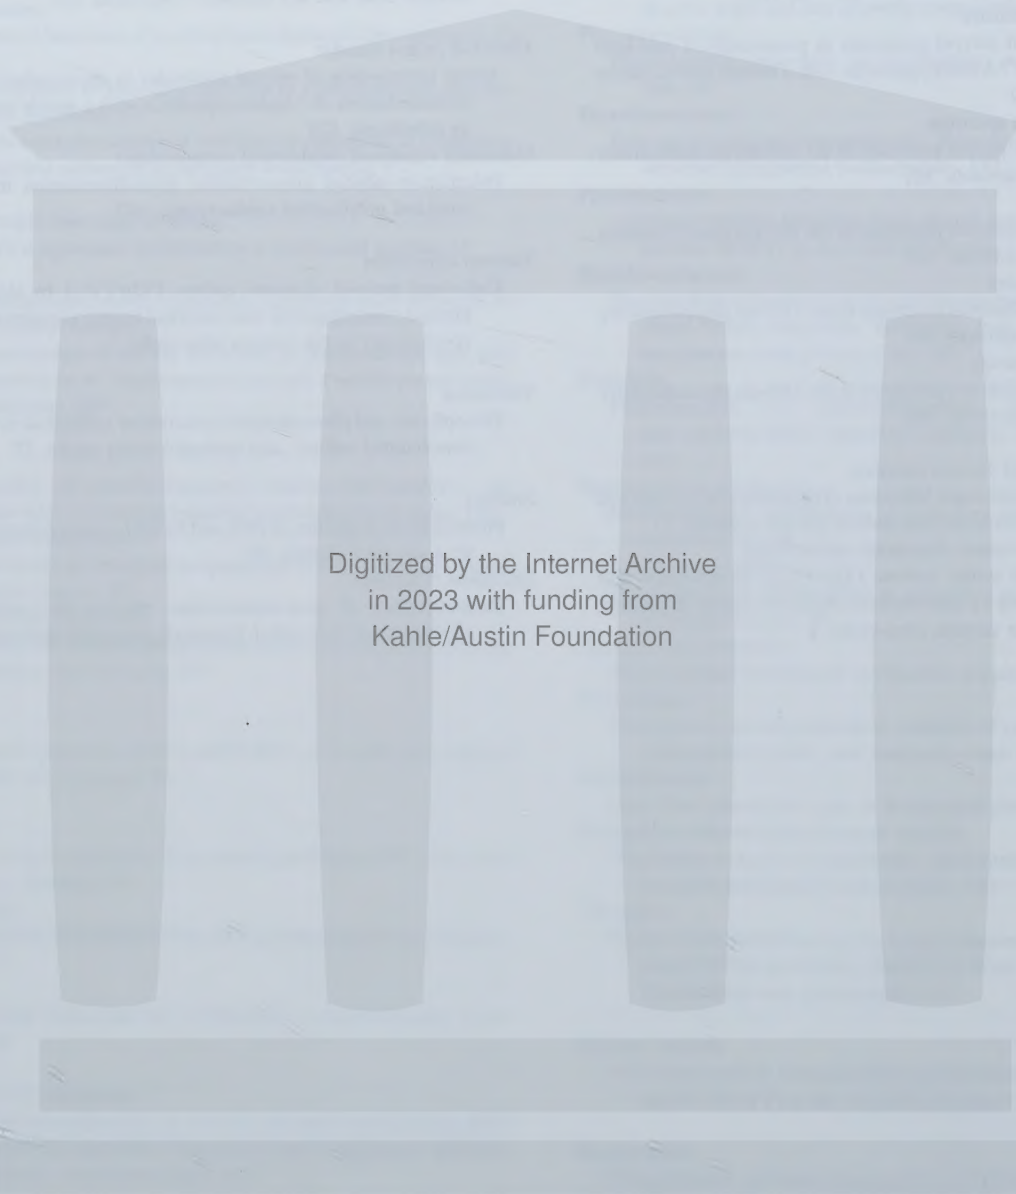

Photophysics and photochemical oxidation of yohimbine in moderately concentrated sulfuric acid methanol–water media, 57

Zirconia

Photocatalytic properties of ZrO_2 and Fe/ZrO_2 semiconductors prepared by a sol–gel technique, 89

Zirconium complexes

Photochemistry of *ansa*-zirconocenes: ethylene-bis(1-indenyl)- and ethylene-bis(4,7-dimethyl-1-indenyl) zirconium dichlorides, 137

FROM ELSEVIER SCIENCE...
SCIENCE PUBLISHER TO THE WORLD

A FREE alerting service by E-mail for Elsevier Science journals.

ContentsDirect allows you unrivalled access to the tables of contents pages of Elsevier Science journals in the following subject areas:

- Chemistry and Chemical Engineering
- Clinical Medicine
- Computer Science
- Earth and Planetary Sciences
- Economics, Business and Management Science
- Engineering, Energy and Technology
- Environmental Science and Technology
- Life Sciences
- Materials Science
- Mathematics
- Physics and Astronomy
- Social Sciences
- Multidiscipline

What does ContentsDirect provide?

- Journal title
- Volume and issue number
- Title of paper
- Names of authors
- Page details
- Anticipated publication date
- News and offers

Why register to ContentsDirect?

- Provides via E-mail advance notice of forthcoming papers, allowing you to reserve the issue at your library.
- Provides an invaluable information resource to scientists and researchers requiring the very latest information on soon-to-be published papers.
- Keeps you at the forefront of current research.
- Enables you to create a personal archive of key journal contents in your field of interest.

How to register for ContentsDirect:

- The quickest way to register for **ContentsDirect** is via Elsevier Science home page on the world wide web.
- Registration is simple and the selection of titles is provided by access to drop down menus of all subject classifications with a complete listing of all titles available.
- If you wish to select new titles or amend your existing selection - simply re-visit the web site and personally make your changes.

Register Now!

Elsevier Science on the Internet

Your comprehensive
and easy-to-use guide to
the world-wide range of
Elsevier Science products
and services.

Visit Elsevier Science
on the Internet and access
a unique repository of
information covering the
entire scientific spectrum.
Our time-saving search
facilities will lead you
to our frequent updates
in seconds.

Main features include:

Alerting and awareness
facilities for new and forthcoming
publications.

Fast, time-saving search facilities.

Frequent updates.

Guide for Authors

Submission of Papers

Authors are requested to submit their manuscripts to

Editor-in-Chief: Professor R.P. Wayne

Physical and Theoretical Chemistry Laboratory
South Parks Road
Oxford OX1 3QZ
UK

FAX: +44 (1865) 275410

INTERNET: JPHOTO@Physchem.ox.ac.uk

Authors in the USA and Canada may submit their manuscripts to the North American Editor:

Professor R.P. Steer

Thorvaldson Building
University of Saskatchewan
110 Science Place
Saskatoon, SK
Canada S7N 5C9
FAX: +1 (306) 966 4730
INTERNET: STEER@SASK.USASK.CA

Authors in Asia should submit their manuscripts to the Asian Editor:

Professor H. Masuhara

Department of Applied Physics
Osaka University
2-1 Yamada-oka
Suita, Osaka 565
Japan
FAX: +81 6 876 8580

Contributions are accepted on the understanding that authors have obtained the necessary authority for publication. Submission of an article is understood to imply that the article is original and unpublished and is not being considered for publication elsewhere. Upon acceptance of an article by the journal, the author(s) will be asked to transfer the copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Language

Papers will be published in English.

Authors in Japan please note that information about how to have the English of your paper checked corrected and improved (*before submission*) is available from: Elsevier Science Japan, Editorial Service, 1-9-15 Higashi Azabu, Minato-ku, Tokyo 106-0044, Japan; Tel: +81-3-5561-5032; Fax: +81-3-5561-5045; E-mail: info@elsevier.co.jp

Manuscript Preparation

Three copies of the manuscript should be submitted, in double-spaced typing on pages of uniform size with a wide margin on the left. Some flexibility of presentation will be allowed but authors are urged to arrange the subject matter clearly under headings such as Introduction, Experimental details, Results, Discussion, etc. References should be numbered consecutively (numerals in square brackets) throughout the text and collected together in a reference list at the end of the paper. Journal titles should be abbreviated according to the Chemical Abstracts Service Source Index, 1970 edition, and supplements. The abbreviated title should be followed by volume number, year (in parentheses) and page number. Authors are reminded that delays in publication may occur if the instructions for submission and disk and manuscript preparation are not strictly followed. Authors are strongly recommended to submit disks to aid rapid processing. To facilitate communication, authors are requested to provide their current e-mail address, phone and fax number.

Illustrations

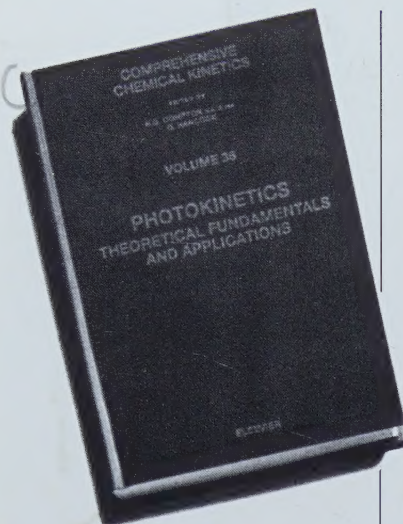

Line drawings and cyclic or aromatic formulae should be in a form suitable for reproduction, drawn in Indian ink on drawing paper. They should preferably all require the same degree of reduction, and should be submitted on paper of the same size as, or smaller than, the main text to prevent damage in transit. Photographs should be submitted as clear black-and-white prints on glossy paper. Each illustration must be clearly numbered. "Quantity calculus" notation should be used for the labelling of the graph axes. Legends to the illustrations must be submitted in a separate list. All tables and illustrations should be numbered consecutively and separately throughout the paper.

Offprints

Offprints can be ordered at prices shown on the offprint order form.

Further Information

All questions arising after acceptance of a paper, especially those concerning proofs, should be directed to Elsevier Science Ireland, Elsevier House, Brookvale Plaza, East Park, Shannon, Co. Clare, Ireland (Tel.: +353 (61) 709600; Fax: +353 (61) 709111; E-mail: postmaster@elsevier.ie). The full and complete Instructions to Authors can be found on the World Wide Web: access under <http://www.elsevier.nl> or <http://www.elsevier.com>.

ELSEVIER
An imprint of
Elsevier Science

The only resource providing a concise treatment of photokinetics, its principles, its methods and applications – published in English

Photokinetics, Theoretical Fundamentals and Applications
Volume 36 in the series *Comprehensive Chemical Kinetics*

Editors: **H. Mauser***, **G. Gauglitz**, *Institut für Physikalische und Theoretische Chemie, Eberhard-Karls-Universität Tübingen, Auf der Morgenstelle 8, D-72076, Tübingen, Germany*

Interest in photochemical reactions has increased tremendously in recent years. Whereas books concerning thermal kinetics can be found in large numbers, only short articles or research reviews are written on photokinetics. As a consequence even in respected journals photokinetic aspects are considered which have already been discussed in detail years ago. One of the few general studies on photokinetics was written by Mauser some years ago in German.

In recent years, the combination of spectroscopic and chromatographic methods opened totally new ways for the measurement and evaluation of photochemical reactions. As a consequence the topics of the mentioned book as well as

some experimental set-ups were considered to be worth a new edition published in English – hence the publication of ***Photokinetics – Theoretical Fundamentals and Applications***.

Photokinetics – Theoretical Fundamentals and Applications makes essential reading for advanced students to get an understanding for details in quantitative considerations of photochemical reactions. Researchers as well as professionals in industry, university or governmental institutions will find this book an invaluable addition to their library. Ensure your library keeps up to date – to order your copy, simply complete and return the order form to your nearest Elsevier Science office.
